(a) Organizational demand, data growth and coordination
X/H: scope expansion may add interdependencies
Task uncertainty and interdependence
T
Information-processing requirements
T/H
DSS/coordination adaptation
A/E
Usable capacity and decision enactment
T
T/A
E
A/E
Selection, shared meaning and attention protection
Data quantity, variety and arrival rate
Data/model interfaces and lifecycle work
(b) Endogenous observation: selection can change without volume growth
Deployed decision policy
F/S
Selected observations and data distribution
F/S
Subsequent model/ policy updating
F/S: repeated deployment may amplify, stabilize or be corrected
